THE LABOUR FORCE - VICTORIA  
FEBRUARY 1980

28 APRIL 1980

DEPT OF NSW

3 MAY 1980

**INQUIRIES** Section (Labour force statistics) on Melbourne (03) 63 0181; for copies of this publication ask for Publication Inquiries.

**MAIN FEATURES**

Total unemployment during February 1980 was estimated at 109,000 persons, or 6.1 per cent of the labour force. This was slightly higher than the January 1980 estimate of 105,600 (6.0 per cent) unemployed persons and almost the same as the estimate of 109,900 (6.3 per cent) unemployed persons a year earlier in February 1979. Of the total unemployed persons, an estimated 20,000 (18 per cent) were seeking part-time work. Almost three-quarters of these, an estimated 14,200, were women.

The major change in the composition of the labour force occurred among married women. There were an estimated 25,500 more married women in the labour force in February 1980 than in January 1980. This substantial increase was similar to the estimated increase of 22,600 in the number of married women in the labour force between January and February in 1979. Of the estimated 25,500 increase in the number of married women in the labour force, there was an estimated increase of 18,000 in the number of employed married women and an estimated increase of 7,500 in the number of unemployed married women.

The increase in the number of employed married women was the main component of the estimated increase in the total estimated number of employed persons in Victoria from 1,660,600 persons in January 1980 to 1,686,200 persons in February 1980.

**EXPLANATORY NOTES****Introduction**

This monthly publication, first published for August 1978, contains Victorian labour force estimates derived from the population survey conducted throughout Australia each month by the Australian Bureau of Statistics. Before February 1978 the survey was conducted on a quarterly basis in the months of February, May, August, and November each year.

**Conduct of ABS population survey**

2. The survey is based on a multi-stage area sample of private dwellings (about 6,500 houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covers about one half of one per cent of the Victorian population. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and the 12th of each month. Because of operational problems arising from the Christmas and New Year holidays the December surveys commence a week earlier than usual (with most interviews being conducted during the second week) and the January surveys commence a week later than usual. The information obtained relates to the week prior to the interview (i.e., the survey week).

**Scope of survey**

3. All persons aged fifteen years and over are included in the survey except the following: members of the permanent defence forces; certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations; non-Australians on tour or holidaying in Australia; and members of non-Australian defence forces (and their dependants) stationed in Australia.

**Definitions**

4. The labour force category to which a person is assigned depends on his actual activity (i.e., whether working, looking for work, etc.) during the survey week. The definitions conform closely to the international standard definitions recommended by the International Labour Organisation.

Employed persons comprise all those aged 15 years and over who, during the survey week:

- (a) worked for one hour or more for pay, profit, commission, or payment in kind in a

job or business, or on a farm (including employees, employers, and self-employed persons); or

- (b) worked for fifteen hours or more without pay in a family business or on a farm (i.e., unpaid family helper); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the survey week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks, up to the end of the survey week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- (d) were employers or self-employed persons who had a job, business or farm, but were not at work.

Unemployed persons are those aged 15 years and over who were not employed during the survey week, and:

- (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the survey week and:
  - (i) were available for work in the survey week, or would have been available except for temporary illness (i.e., lasting for less than four weeks to the end of the survey week); or
  - (ii) were waiting to start a new job within four weeks from the end of the survey week and would have started in the survey week if the job had been available then; or
- (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the survey week (including the whole of the survey week) for reasons other than bad weather or plant breakdown.

The labour force comprises all persons who, during the survey week, were employed or unemployed, as defined above.

Full-time workers are those who usually work 35 hours a week or more and others who, although usually part-time workers, worked 35 hours or more during the survey week. Part-time workers are those who usually work less than 35 hours a week and who did so during the survey week. When recording hours of work, fractions of an hour are disregarded.

Persons not in the labour force are those who, during the survey week, were not in the categories "employed" or "unemployed".

#### Reliability of estimates

5. Since the estimates in this publication

are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, are subject to sampling variability; that is, they may differ from the figures that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included in the survey. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors. Standard errors of survey estimates and month to month movements are shown at the foot of page 8.

#### Related publications

6. Users may also wish to refer to the following publications, available on request, which are issued by the ABS Canberra Office:
